

CensorNet Web Filtering & Content Control

Provide Internet access on your terms

CensorNet internet filtering is simply installed on your network and will improve productivity, reduce risk and enforce your internet access policies.

Our web filters enable you to control access to the web based on category, time, user or workstation giving you comprehensive internet monitoring control. You can rely on CensorNet internet filtering to eliminate:-

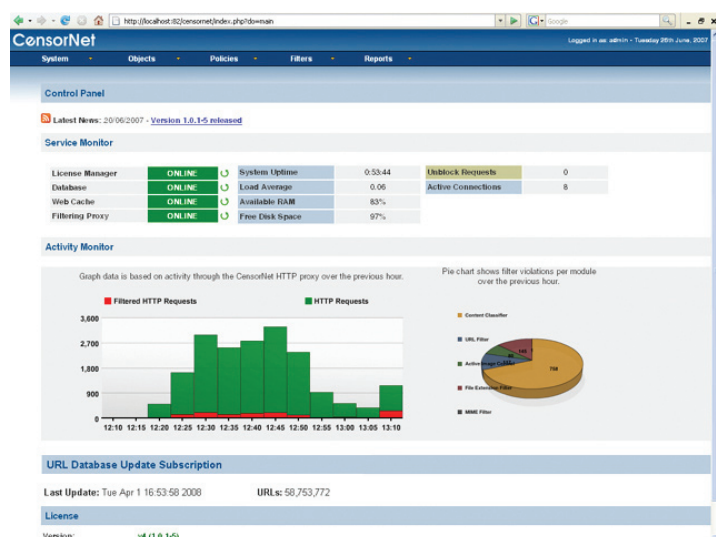

- offensive images
- inappropriate sites
- viruses, malware, phishing
- anonymous proxy sites

The CensorNet Solution

- **Automatic Active Directory synchronisation** by organisational unit or primary group • Supports Windows Vista, Windows 7 clients and Windows 2008r2 server
- **Monitor bandwidth** to see what is causing network bottlenecks by username, workstation, category
- **Monitor Internet activity** with detailed reports for every employee and PC.
- **On-disk cache** improves performance and can pre-fetch web site content on a schedule
- **Enforce an Acceptable Usage Policy** using advanced rules and group based policies.
- **Block access** to undesirable, offensive and potentially illegal content with leading edge filtering technology.
- **Limit personal Web browsing** to non-business hours.
- **Improve network performance** by restricting access to non-work related downloads.
- **Improve network security** by avoiding Web-borne threats such as viruses, spyware, phishing and malware.
- **Deploy as a proxy server or transparent filter** depending on your requirements.
- **Departmental managers** receive a daily, weekly or monthly management report detailing user activity within their assigned groups.
- **Special "Advisory" mode** allows staff to override blocked pages if they deem the content acceptable for their work remit.
- **Unrivalled Filtering** The most comprehensive database of 60,000,000 websites human-categorised in over 70 categories.
- **Real-time detection** For unknown sites, realtime rating technology will classify the site on-the-fly for complete protection.
- **Intercept secure HTTPS (SSL enabled) web sites** and scan for unsuitable content.
- **Safe Image Searching** CensorNet will scan image content and prevent searching for unsuitable content via Google & Yahoo!
- **Passive or Strict Filtering** modes allow you to decide how to enforce acceptable usage within your business.
- **Audit Trails** for every user and machine on your network - Accountability and visibility.
- **Anti-malware module** allows you to block known malware sites/files from even being accessed by the Web browser.
- **Anti-phishing module** uses the Anti-Phishing Working Group database so that CensorNet can block phishing sites instantly.
- **Anti-virus scans web pages and files** for viruses, trojans, spyware and other threats before they are downloaded to the Web browser

CensorNet's Web Filtering & Content Control solution is powered by four key technologies to provide the most accurate and relevant content filtering experience for your organisation

- Web site requests are passed through one of the most comprehensive databases in the industry, with over 60 million Web sites categorised into 70 useful categories.
- For uncategorised sites, the powerful real-time rating engines will analyse the page content and categorise it based on a range of multi-lingual subject matter from Alcohol to Weaponry, including Pornography, Violence, Gambling and many more.
- Unlike many other products, CensorNet will investigate more than just the words on a page. Using sophisticated technology, all picture content will be scanned for inappropriate material and replaced with a "safe symbol" if any is found.
- A range of powerful modules inspect other aspects of the Web site including file extensions, MIME types, file upload requests and more.

The CensorNet Solution - The easy-to-use CensorNet administration interface provides an instant snapshot of productivity on your network.

CensorNet™ Professional is a Web filtering system for any type of organisation - from small business, to schools, colleges, libraries and global organisations.

Filtering Features Continued

- **Anonymous Proxy Detector** The Anonymous Proxy realtime rater is designed to detect zero-hour (or unclassified) anonymous proxy sites, or sites containing links to anonymisers. Combined with the database of known sites, which are updated daily, this provides a powerful and accurate defense against anonymous proxies.
- **Image Filter** inspects all common image file formats for unsuitable content using sophisticated detection routines and artificial intelligence. Image Filter stops unsuitable images being displayed
- **File Extension Module** The File Extension module allows the administrator to specify a list of file extensions to block.
- **File Upload Module** Prevent confidential documents from being uploaded to file sharing and Webmail sites (HIPAA compliance) for anonymous distribution.
- **Custom URL Filter** Maintain your own list of sites relevant to your business which should be blocked or allowed.
- **MIME-type Filter** Block files and streaming media by MIME type.

Policy Features

- **Open** policy provides unfiltered access to the Internet for trusted users or PC's. The Open mode can also be used for "stealth" operation which simply logs all Internet access.
- **Advisory** Policy allows users to override blocked pages if they deem them to be acceptable for their work remit.
- **Closed** policy ensures that the user or PC cannot access the Web. This is useful for unknown devices or specific groups of PC's.
- **Restricted** policy creates a Walled Garden for a particular user or PC, ensuring that only certain categories of site can be accessed.
- **Filtered** policy contains an unlimited set of rules for filtering the user or PC based on the extensive modules available within CensorNet.
- **Scheduling** set up a schedule for when each of your policies is active and applies to a group of users or PC's. Schedule policies to activate during the working day.

Reporting Features

- **Scheduled Reports** for departmental managers allows them to review Internet activity without needing to access CensorNet
- **Report Builder** Create customised reports based on various criteria such as time/date, username, PC, domain, filter module, policy name, etc.
- **Visits Report** Drill down on access by user, PC or workstation and view every request made.
- **PDF Reports** Convert reports to PDF for distribution.
- **Top 20 Charts/Tables** See a snapshot of activity through a set of charts and tables.
- **Who's Browsing** See a list of active users/machines.

Image Filter stops unsuitable images being displayed

Key Features

- Real-time Lexical Analysis in 16 languages
- Real-time Image Analysis
- 60 million+ URL's Categorised
- Anonymous Proxy zero-hour detection
- Policy based rules for individuals or groups
- Scheduled Policies
