

CensorNet

Control • Analyse • Filter • Comply • Protect

CensorNet™ Professional is a leading-edge policy based Web content control solution comprising enterprise class features and flexibility at an affordable price point for the Corporate and Education markets.

The CensorNet™ Professional technology comprises a powerful and modular HTTP proxy architecture, designed specifically to filter and classify Web content in real time for authenticated network resources.

CensorNet™ Professional allows the administrator to define and enforce an Acceptable Usage Policy quickly and easily, with the flexibility to assign individual access rules on a per user or per workstation basis and to generate reports for visibility and accountability.

CensorNet™ Professional is powered by a suite of best of breed Web filtering technologies, including an advanced lexical content classifier, real time image analysis engine, URL categorisation service and file type scanner. The flexible nature of the CensorNet™ architecture offers the ability to plug-in customised filtering techniques to suit your organisation, application and environment.
