

CensorNet™ MailSafe provides leading-edge email Protection, Management and Compliance services for the business and education markets.

Increasingly, email delivery systems are groaning under the strain of spam, virus and other malicious threats. Analysis indicates that unwanted email currently accounts for between 65 and 90 percent of traffic each day. This sheer volume of unwanted mail is undoubtedly a drain on valuable time, effort and resources.

Ideally suited to environments with multiple domains and maybe geographically dispersed administration, CensorNet™ MailSafe quite simply removes the headache, allowing clients to get on with effectively running their business. By processing email at the internet level, CensorNet™ MailSafe ensures that there is no costly hardware or software for clients to install and maintain whilst eliminating threats and delivering only 'clean', legitimate email to the client network.

The spotlight is also on good corporate governance. Regulations such as Sarbanes Oxley, Basel 2 and proper corporate governance require companies to not only keep message details, but also to provide evidence when required.

BENEFITS

Effective
Every hour of the day

- Managed 24x7 Service
- Trusted and relied upon by over 2 million users
- Total visibility, logging, reporting, audit and control
- Geographically dispersed e-mail transaction centres

- Eliminates wasted bandwidth
- No technical management needed
- Fast, risk free deployment – new clients are protected within 24hrs
- Zero end user disruption
- Dedicated Customer service with 99.999% availability

CensorNet™ MailSafe Service

Email is processed at the internet level, through carrier class Message Transfer Agent technology, integrated with 'best of breed' filters, eliminating threats and delivering only clean email to client networks.

Key Elements include:

- ✓ Multiple Virus Filters
- ✓ Multiple Spam Filters
- ✓ Content Control
- ✓ Image Scanner removes unsuitable pictures
- ✓ Archive E-mail (backup)
- ✓ Secure Web Control Panel
- ✓ Inbound & Outbound Management
- ✓ Transport Level Security (TLS)

How it Works

The service works by simply modifying the company MX records so that email is directed to CensorNet™ MailSafe transaction centres. On receipt, each mail is assigned a mail ID to provide full logging, audit and tracking. Email is scanned and only 'clean' email is passed on to clients' email servers.
