

CENSORNET DESKTOP SURVEILLANCE

CensorNet Desktop Surveillance is a client-server solution for monitoring, recording and analysing real-time activity on **desktop, virtual desktop, terminal** services and **remote** desktop sessions. There is no substitute for video evidence and with CensorNet Desktop Surveillance it is like having a clever camera inside every computer. CensorNet Desktop Surveillance is a powerful tool that will help you to prevent corporate **security violations**, discover sensitive **data leaks**, comply with **regulations** and improve employee **productivity**.

<input type="checkbox"/> Record local sessions and remote sessions	<input type="checkbox"/> Off-line recording with re-sync	<input type="checkbox"/> Record terminal services and Citrix
<input type="checkbox"/> Less than 5% CPU usage	<input type="checkbox"/> Active Directory integration	<input type="checkbox"/> Remote installation of recording agent
<input type="checkbox"/> Export video snippet and screenshots	<input type="checkbox"/> Search video by title, application, user, host	<input type="checkbox"/> View desktop activity in real-time & rewind

CensorNet Desktop Surveillance is a network based monitoring system for desktop, virtual, remote and terminal services clients. Desktop Surveillance consists of an agent, which records activity on the computer (multiple monitors supported), a server which stores the video for later review and a viewer for analysing investigated data.

Risks solved by CensorNet Hosted Web Security

- Application usage** – Know exactly what your users are doing at their computer when they are using it locally or logged in remotely. Search by window title, application name, date, user and computer. Use the information for security and training; learn how they use applications and use this data to improve their skills.
- Privileged users** - Control and monitor the work of system administrators and privileged users who access servers and core infrastructure equipment locally and remotely. In the case of an incident, you can rewind and reconstruct the actions that were performed assisting the speed of repair. Export video snippets as evidence.
- Data Leakage** – Discover the misuse of confidential applications or leakage of sensitive data and intellectual property. Export a video snippet as evidence.
- Support** – Give your help desk engineers control of remote desktops when a problem is reported. Allow them to rewind and see exactly what steps produced the error and what error messages were displayed. Resolve issues faster and use the video for training purposes.

"This has been ideal for monitoring the administration of our networks. We can go back and check what action was taken when an incident occurs. It's also been a very handy training tool"
-- North Diamond Ventures

CensorNet

Network diagram

CensorNet Desktop Surveillance works with any network protocol and any type of remote access: Citrix, Terminal Server, Remote Desktop, VNC, etc. The solution also supports any Windows-based operating system (both server and workstation). The product creates a video recording of user actions; mouse moves, interface element selection, media materials playback, text input, etc. Recording is performed regardless of active application and the supplied Player application can be used for play back and analysis from any computer.

Requirements

Client (agent)

- Windows XP, 2000, Vista, 7
- Windows Server 2000-2008r2
- 32-bit or 64-bit
- Disk usage: 5Mb per hour recording
- 5% CPU usage at 8-bit depth quality

Server

- Windows Server 2000-2008r2
- Dual core processor or better
- 2GB RAM or better
- Disk: 5Mb per agent per h
- 100 agents = 10% CPU usage

Frequently Asked Questions

How is the initial cost of my requirements calculated and are there any ongoing costs?

The price is based on the number of agents that are allowed to connect to the server at any one time. For example, if you have 100 computers, you can install the agent on all 100 computers. If you then buy a license for 50 agents, then you can select up to 50 of the 100 agents to be actively recording at any one time. You can move a license from one agent to another with a few clicks of the mouse.

Will Desktop Surveillance record if the connection to the network is lost?

Yes, if configured to do so, it will record video locally on the computer and then synchronise it with the server the next time the connection is available. Local video is encrypted and hidden.
