

CENSORNET HOSTED WEB SECURITY

CensorNet Hosted Web Security is a fast and flexible cloud based web filtering solution which is ideal for securing networks with multiple locations and **remote, unsupervised or roaming** users. Easily deployed by installing our Cloud Link client which runs silently in the background on every computer, it intercepts web traffic from **any web browser** on the computer using **any Internet access** point available; wired, Wi-Fi or 3G. An easy to use and centralised web console allows you to control and report on all user activity.

<input type="checkbox"/> Over 200 million web sites classified	<input type="checkbox"/> Filter roaming users on any Internet connection	<input type="checkbox"/> Central management of filtering policies
<input type="checkbox"/> No proxy; low latency browsing	<input type="checkbox"/> Granular filter rules down to user level	<input type="checkbox"/> Active Directory integration
<input type="checkbox"/> Policy scheduling by time of day	<input type="checkbox"/> Cloud Link client secures each PC	<input type="checkbox"/> Detailed reporting

Unlike competitor products, CensorNet Hosted Web Security does not proxy the data between each computer and the cloud. This provides a superior browsing experience for the user and reduces the amount of bandwidth required at either end. The Cloud Link client takes care of this along with user authentication and security. Once installed, the Cloud Link client cannot be removed, stopped or re-configured without an administrator password.

Risks solved by CensorNet Hosted Web Security

- Time Wasting** - Are you aware of how much time your employees are spending on social networking sites, watching films online, booking holidays over the internet, buying and selling on auction sites?
- Malware** - Do you know how much money you are spending on cleanup of malware from your computers? Are you aware of the financial effect of any downtime in lost revenue and productivity from your staff?
- Data Leakage** - Whether malicious or unintentional, data leakage can be both embarrassing and costly. Stop employees using free web based email and file storage sites.
- Bandwidth** - Downloading and streaming are just two reasons that can slow your internet connection to a crawl. This can result in penalties from your ISP provider for going over your bandwidth quota.
- Legal Action** - As an employer, you have a duty of care to ensure that your employees are not subjected to offensive or illegal material found on the internet.
- Illegal Content** - Protect your company and employees against illegal content found on the web.

"I love the straightforward and uncluttered interface. Reporting tools allows me to quickly see who has accessed what. It's very competitively priced. Overall excellent!!" -- Wales Co-operative

Network diagram

The Cloud Link client software is installed on each computer that will participate in the service. The computers can be local or remote, on a network or standalone. Cloud Link acts as a local HTTP proxy, which intercepts web traffic on the local computer and then asks the cloud servers whether access is allowed or denied. If allowed, the Cloud Link client requests the web site directly. If denied, the Cloud Link replaces the web site request with an Access Denied page.

Requirements

Cloud Link client

- Windows XP, 2000, Vista, 7
- Windows Server 2000-2008r2
- 32-bit or 64-bit

Web console

- Internet Explorer 8+
- Firefox 3.6+
- Chrome 11+

Frequently Asked Questions

How is the initial cost of my requirements calculated and are there any ongoing costs?

Pricing is based on the number of computers (or devices) that you have installed the Cloud Link client software on to. This is often referred to as per-seat licensing. You have the option of being billed monthly or yearly in advance, which attracts a discount. You continue paying for as long as you are using the service.

Do I have to use client software? Why is it needed?

Yes, you should use the Cloud Link client software. The reason for this is that it enables 100% ICAP compliant communication between the client and service, which delivers optimal performance to the user. The client also provides a 'single-sign-on' style authentication system which is transparent to the end-user.

Are there any discounts available?

Yes; we discount 50% for education, not profit and training companies, 20% for local government, government and healthcare organisations.
