

CENSORNET MAILSAFE

CensorNet MailSafe is a hosted **e-mail filtering** and management service that allows you to control inbound and outbound e-mail, protect against **viruses** and **spam** and in the event of a mail server **failure** it allows you to access your inbox over the web. **Unlimited archive storage** provides a continuous backup of your e-mail. Stopping **spam** before it reaches your mail server improves your **bandwidth** and reduces the **load** on your mail server.

<input type="checkbox"/> No hardware required	<input type="checkbox"/> Up to 7 years archiving for compliance	<input type="checkbox"/> Active Directory synchronisation
<input type="checkbox"/> Protection from all known viruses	<input type="checkbox"/> Emergency inbox access via the web	<input type="checkbox"/> Support for roaming users
<input type="checkbox"/> 99.9% spam protection	<input type="checkbox"/> Powerful rules engine	<input type="checkbox"/> Detailed reporting

CensorNet MailSafe has a sophisticated rules engine that allows you to completely customise how mail flows to and from your organisation. You can set up rules to inspect the content of e-mail, investigate attachments, size, headers, images and take appropriate actions such as deliver, drop, quarantine and notify. There are over 20 conditional triggers that can be set up. An example may be to quarantine e-mails over a certain size and notify the administrator.

Risks solved by CensorNet MailSafe

- Malware & Spam** - E-mail scams, spam and phishing e-mails are the source of many malware outbreaks. Users accidentally click on links which appear genuine but redirect to malicious websites. MailSafe can block these messages before they reach your network.
- Data Leakage** - Concerned about confidential information being e-mailed outside of your organisation? Notify or block when e-mail containing attachment types or keywords is sent from your network.
- Server failure** - in the unlikely event that your mail server fails, users are able to log in to the MailSafe portal and view, compose and reply to e-mails. MailSafe will also queue your e-mail for 5 days giving you plenty of time to restore the broken server.
- Bandwidth** - By blocking spam before it reaches your network you will reduce the bandwidth used and save resource on your mail server as it does not need to process the spam messages.
- Compliance** - Do you work in an industry that needs to store e-mail for compliance? MailSafe can archive your e-mail (inbound and outbound) for up to 7 years.

"Since subscribing to MailSafe, we no longer waste time dealing with spam and have dramatically reduced email virus related incidents, saving us costly cleanups. I also have peace of mind that all our e-mail is backed up" -- Tailormade Financial Planning Ltd

CensorNet

Network diagram

The system works by redirecting the e-mail for your domain by altering the MX (Mail eXchange) record (part of DNS). The MX record determines where e-mail will be delivered so it is changed to point to our servers. The redirected e-mail then flows through the CensorNet MailSafe cloud where it is filtered for spam, viruses and content, and optionally archived for safe keeping. Once the e-mail has been filtered, it is sent on to your own e-mail server which means you are only receiving clean e-mail rather than spam as well. This helps to reduce the load on your e-mail server and improve your bandwidth.

Requirements

- SMTP Server, e.g. Exchange
- Active Directory (for user sync)
- Your own domain name
- Web browser with Ajax support
- Adobe Flash

Frequently Asked Questions

How is the initial cost of my requirements calculated and are there any ongoing costs?

MailSafe is priced on the number of active mailboxes for your domain(s) and is billed annually in advance based on a minimum 12 month term. We do not charge for multiple domains, aliases or dormant accounts, so you only pay for what you actually use.

Is CensorNet MailSafe suitable for schools?

Yes, we understand that schools may have thousands of e-mail accounts but not all will be active. We have various models to cater for school environments, such as only charging for staff mailboxes. Please ask our sales team for advice.

Are there any discounts available?

Yes; we discount 50% for education, not profit and training companies, 20% for local government, government and healthcare organisations.

Can I use CensorNet MailSafe with my Gmail, Yahoo or Hotmail account?

No, it is not possible to use MailSafe with domains that you do not control. It is necessary to change the domain MX records so that mail is redirected to our servers.
