

WEB SECURITY (WS)

WEB SECURITY FROM CENSORNET PROVIDES PROTECTION FROM HARMFUL, OFFENSIVE OR INAPPROPRIATE CONTENT AS WELL AS MANAGING TIME SPENT ON WEBSITES THAT CAN HAVE A SIGNIFICANT IMPACT ON PRODUCTIVITY.

Multiple security layers at the gateway offer comprehensive protection from web-borne malware and other threats using a powerful combination of real-time traffic inspection, URL reputation analysis and heuristics.

Web Security is fully integrated with CensorNet's Unified Security Service (USS) that also includes Email Security, Cloud Application Security and Multi-Factor Authentication. USS provides a single web interface for central policy configuration and management, as well as data visualization and reporting.

Web Security is deployed using agents or local proxies, or a combination of both, to meet the needs of organizations of all sizes.

WEB SECURITY

- Manage over 140 categories of web content and billions of web pages
- Optionally protects against malware and other web threats at the gateway using multiple security layers and a powerful combination of technologies
- Complete protection – including deep inspection of SSL encrypted traffic
- New URLs are analyzed in real-time for malware and automatically categorized using machine learning techniques
- BYOD and guest device ready with Captive Portal for zero-touch filtering
- Policies can be set based on pre-defined Web Categories or custom URL Categories or keywords, and applied to groups of users or device groups
- Flexible deployment options – agent or proxy, or both
- Agents for Microsoft Windows and MAC OS X complement endpoint AV and ensure web content management policies are persistent when mobile users are working remotely
- Mobile device coverage by routing traffic (via VPN) through the CensorNet Cloud Gateway, on premise or in the Cloud

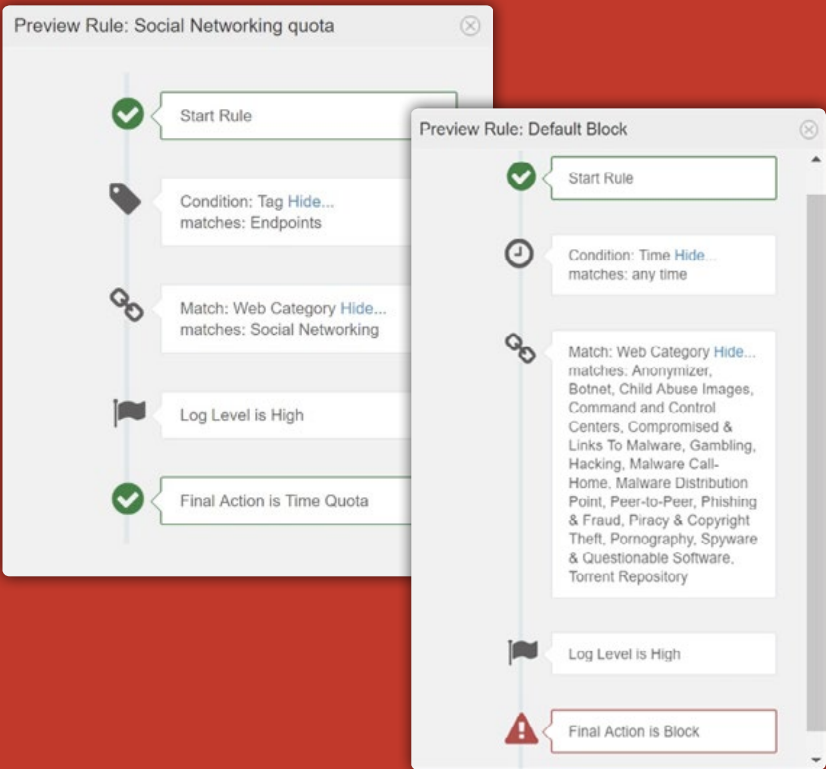

Cloud Application Security can be enabled instantly without the need for any additional hardware, software or configuration changes to additionally provide discovery, visibility and management of access to 100s of cloud apps and 1000s of actions within apps.

Flexible deployment options simplify implementation, accelerating time to value.

The service is built on the lightweight ICAP protocol with servers deployed in multiple locations worldwide. More sophisticated than DNS-based solutions the service has significantly less overhead than cloud-based proxies eliminating the need to proxy all traffic – with no user-perceived impact to web or cloud application use. Only http request metadata is sent to the CensorNet Cloud and compared against policy.

Web Security provides a single pane of glass to analyze and manage web browsing activity across multiple networks and devices, whether users are on the corporate network or working remotely.

Using purely agents on endpoints, Web Security offers a proxy-less, no gateway approach which significantly reduces latency, preserves the user’s real IP address and maintains privacy by allowing the browser to maintain direct communication with the web application server. Mobile devices can be used to access web applications without causing content to be served based on the location of a cloud proxy, raising false identity theft alerts, or presenting frustrating or confusing error messages to mobile employees.

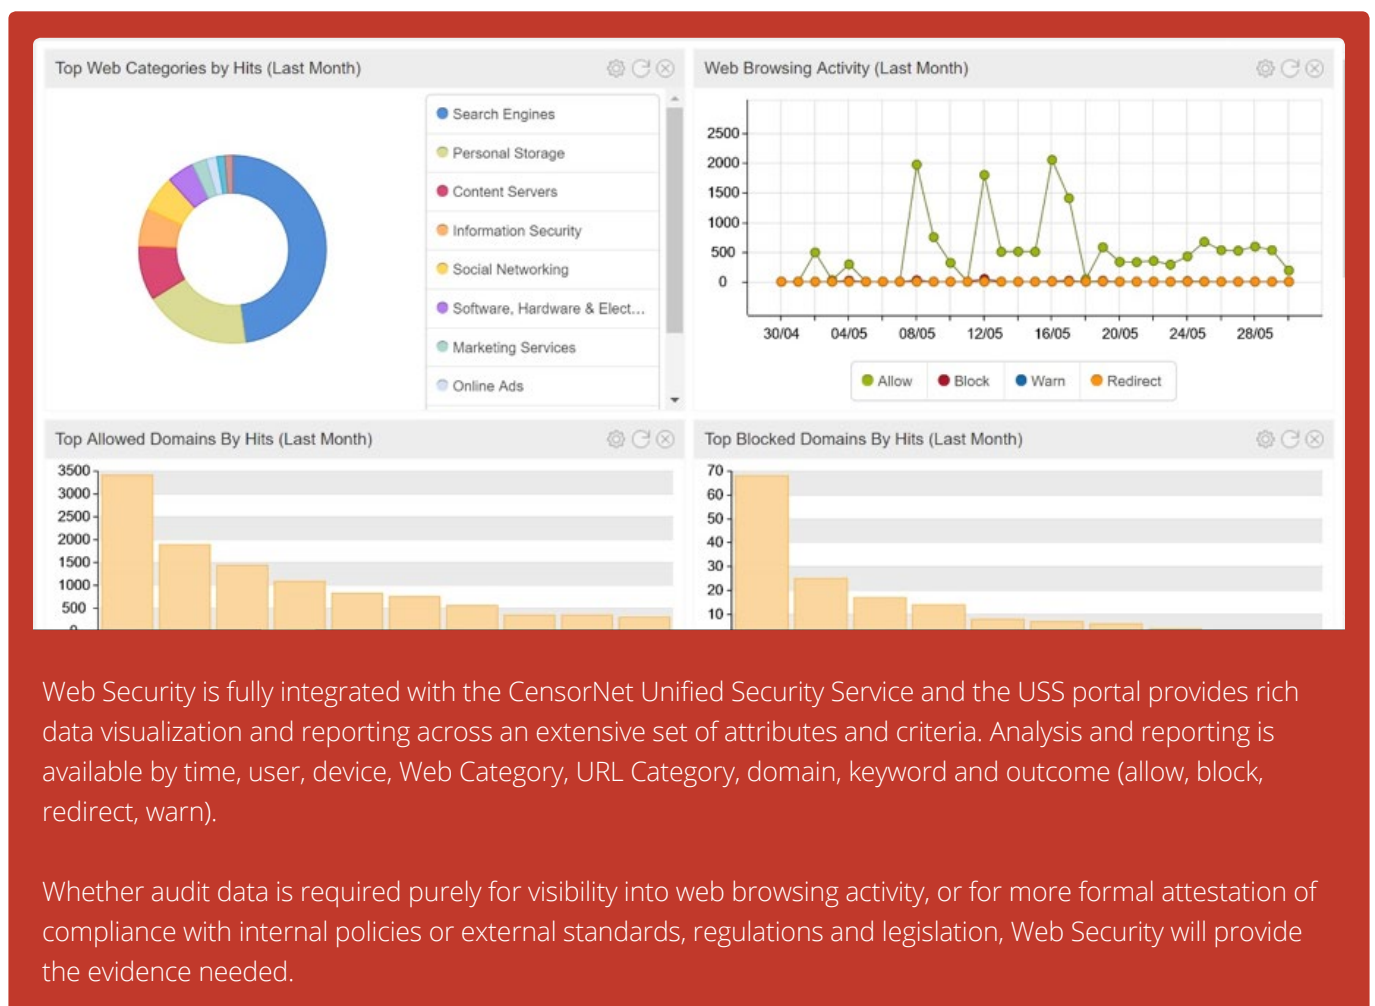

A sophisticated policy engine enables rules that block, allow, or allow and track web browsing activity. Time Quotas can be applied to rules to limit the time spent on shopping sites to 1 hour per day for example, enabling organizations to maintain productivity and effectiveness.

Rules can be user, device or time-based and applied to web content based on Web Category, custom URL Category or keyword match. Conditions can be combined using AND OR logic for power and flexibility.

Users enjoy a fast, unobtrusive experience and the freedom to work however, whenever and wherever they want – with a consistent experience regardless of the device used. IT maintain visibility and where appropriate, control over web browsing.

Agents can be used in combination with the CensorNet Cloud Gateway for sites with populations of fixed desktops, such as call centers. Installing a single gateway rapidly extends web content security policies to the entire network and optionally adds multiple security layers to defend against web-borne malware and other threats.

KEY FEATURES

ICAP	ICAP servers in multiple locations worldwide compare web request metadata against policy removing the need to proxy all traffic for speed, reliability and scalability.
Real-time Anti-Malware Scanning	Incorporates multiple security layers each using a powerful and effective combination of tools and techniques including online threat detection, reputation and heuristics.
URL Filtering	Over 140 categories of web content cover billions of web pages in multiple languages, constantly updated for accuracy and protection.
Automatic Unknown URL Classification	New URLs are analyzed in real-time to ensure only acceptable content is accessed.
HTTPS Inspection	Deep HTTPS inspection allows SSL encrypted content to be scanned for malware (requires CensorNet Cloud Gateway on premise or in the Cloud).
	Ability to disable SSL inspection for specific trusted apps.
	Option to use Server Name Indication (SNI) within the TLS protocol to determine destination domain when a connection is initiated – for light touch URL filtering of BYOD or guest devices without certificate management issues (used in conjunction with the Captive Portal).
Anonymous Proxy Detection	Prevent access to anonymous proxy sites.
Safe Search	Enforce safe search mode on popular search engines including Google, Yahoo, Bing and YouTube.
BYOD / Guest Device Support	Safely allow BYOD and guest device access via the built-in Captive Portal (with SNI support for zero-touch filtering). Allows existing users to log in from personal devices using valid credentials (e.g. Active Directory)
URL Overrides	Create URL categories that can be applied to override or create exceptions within filtering policies.
Gateway Modes	CensorNet Cloud Gateway can operate in explicit or transparent mode.

MANAGEMENT

Policy Engine	Sophisticated policy engine including Active Directory attributes, device IP and MAC address, device type, tag, and differential actions.
Time Schedule	Policies can be applied on a rolling 7-day time schedule.
User Authentication	Multiple authentication methods are supported including Active Directory Kerberos, single-sign-on, Captive Portal and RADIUS accounting.
User Synchronization	Active Directory synchronization service ensures changes to Active Directory are replicated.
Web Interface	Fully integrated with the CensorNet Unified Security Service (USS) portal.
Delegated Administration	Allows creation of multiple administrators with different levels of access to the USS portal.
Customized Notification Pages	Brand notification pages (Block, Captive Portal, etc.) with logo, text and terms of service information.

REPORTING

Real-time Visibility	Productivity charts display instant visibility on compliance with defined access policies. Query web activity in real-time by user, device, domain and category. See exactly which users are accessing which websites.
Report Builder	Administrators can define their own reports based on available field names and criteria. Reports can be saved and then exported to CSV or PDF. Audit reports can be searched using criteria including time, user, device, Web Category, URL Category, domain, keyword and outcome (allow, block, redirect, warn).
Scheduling and Alerting	Link reports to schedules and optionally only receive a report when there is content (alert mode). Alert on keywords, blocked categories, specific domains, etc.
Top Trend Reports	A selection of pre-defined trend reports with chart and table data. Trend reports can be exported to PDF and emailed to recipients.
Multiple Views	Analyze and report by user, device, Web Category, action.
Log Retention & Auto-archiving	Web Security log data is archived automatically after 90 days and available to download from the USS portal for a period of a further 12 months. Longer retention periods are available.

DEPLOYMENT

Gateway	CensorNet Cloud Gateway can be installed on a virtual machine or physical server within 30 minutes to extend security policies to the entire network. Also available in the Cloud.
Agents	Agents for Microsoft Windows and MAC OS X enforce policies on the device. Tamper proof and easy to deploy using an install wizard or via AD Group Policy. Complement existing endpoint AV with web content management.
Deployment Modes	Agent software, direct proxy (set by group policy, WPAD or manually), or gateway mode for guest, personal (BYOD) or non-domain devices.
WPAD Support	Automatic creation of Web Proxy Automatic Discovery (WPAD) file based on network configuration.
WCCPv2 Support	Supports Web Cache Communication Protocol (WCCP) v2 for transparent traffic redirect from Cisco routers / switches.

UNIFIED SECURITY SERVICE

A 360-degree view across web, email and cloud applications at a single glance.

CLOUD APPLICATION SECURITY

Secure adoption of cloud services and applications in your organization.

MULTI-FACTOR AUTHENTICATION

Keep your systems and data safe with multi-factor authentication.

WEB SECURITY

Provide a safe Internet experience for all the people within your organization.

EMAIL SECURITY

A cloud based solution to keep your organization safe from email threats.

IDENTITY

Single shared identity store fully AD integrated.
