# UI Developer (Webservices Team)

Are you an accomplished UI Developer with a passion for single page applications and enterprise dashboards?

Censornet are looking for a UI Developer to join our Webservices Team which is part of our UK R&D department based at the Bristol & Bath Science Park near Emerson's Green, Bristol.

## The role

The role will include migrating the current UI from extJS to a more widely used framework and further development of the core platform user interface and visualisations. This is a varied role and will suit someone who enjoys a small team and a high output work environment. Censornet is a fast-moving company and, as such, the R&D team is dynamic and agile whilst not compromising the need to simply "get things done".

## The successful candidate will have the following skills and experience:

- Experience in developing Single Page Applications, ideally for SaaS companies.
- Exposure to modern JS frameworks especially VueJS or React.
- Experience working in teams with split responsibilities for UI and API.
- Experience in working to regular and short release cycles.
- Excellent communication skills.
- Pixel perfect eye for detail.

## Further desirable skills and experience:

- Server-side JavaScript e.g. node.js
- Experience of code review process, continuous integration (Gerrit, Jenkins).
- Exposure to cloud stacks like AWS, Azure or Google Compute.

## The successful candidate can expect from us:

- Competitive salary
- Share Options
- Private Medical Insurance, Critical illness cover and Death in Service
- Pension
- 24 days holiday, additional days holiday for your birthday and standard UK Bank Holidays
- Free parking
- Flexibility in terms of work hours, work from home days (not full remote working)
- Free hot and cold drinks
