

Full Stack Developer

Are you looking for an opportunity to have significant impact at a great company while building your career? Censornet has built a truly innovative cloud security platform that has no peers in the industry and is seeking a highly motivated Full Stack Developer to join our team.

We exist to protect and serve mid-sized enterprises. We do that through industry-leading innovation and integrating security for all the major attack surfaces to best protect data and businesses.

Our Autonomous Integrated Cloud Security uses strategic machine learning to identify and stop threats that enter an organisation by email, web or cloud or from a multi-channel cyberattack. This means that our clients are automatically protected against cyber attacks, no matter the time of day or night.

Traditional security systems are being fast outpaced. We've built a security posture fit for today — and tomorrow. When it comes to the day-to-day work of protecting our clients, we help say goodbye to alert fatigue and get the job done more efficiently.

We are a talented team of over 50, serving over 4000 customers, 1.1million end users in 54 countries.

The Role:

We are recruiting for an experienced remote-first Full Stack developer to join a team that is responsible for the application layer of our Cloud Security (SaaS) platform. The API and UI provide the glue between Censornet's core security offerings of Cloud Application Security Broker, Web Security, Email Security and Authentication. As a result, you would be exposed to all areas of the platform, work across development teams and be responsible for third-party integrations.

We are looking for a passionate developer who has the experience to take our mature platform forward, maintain code quality, and increase the momentum of new features and improvements. Whilst the code base is mature, there are certainly always new challenges as we are increasingly migrating elements to AWS, serverless and utilising new development techniques to increase efficiency and quality.

The successful candidate will have the follow skills and experience:

- At least 3 years commercial experience with PHP7+ (Laravel) and at least 2 years commercial experience with modern JavaScript frameworks (NodeJS, React, Vue) with demonstrable projects

- Experience developing Single Page Applications in JavaScript
- Experience developing API's with oAuth style authentication, ideally using a PHP framework
- Comfortable with both Object Oriented Programming and Event Driven Programming
- Passionate about security from code quality through to end-user features
- Desire to lead the development of new features or improve existing features, components and modules
- Able to work independently and in a small team in an agile manner
- Able to communicate effectively with nearshore team members over tools such as Slack and Teams
- Excellent communication, English speaking, time management and organisation skills

Beneficial Skills and Experience include:

- Experience working on SaaS applications
- Experience of code review processes, continuous integration (Gerrit, Jenkins, Gitlab)
- Experience of using Docker as part of the software development life cycle
- Experience of using AWS services such as CloudFront, S3, ECS, Lambda
- Working knowledge of Redis, Web Sockets, PostgreSQL

The successful candidate can expect from us:

- Employee share option scheme
- Pension contributions
- Flexibility and remote working
- Optional critical illness & death in service cover
- Optional private medical cover

Why Censornet:

Censornet has adopted a person-first culture, regardless of location. As a result, our team is reactive and agile, with the best talent from across the UK. With both remote working and offices available in Bristol and Basingstoke, we offer the tools and space for our team to thrive.

Censornet is committed to being an inclusive and diverse place to work. The industry-leading work we do would not be possible without bringing together all of the different backgrounds, experiences and skills that our team has. We treat every employee equally, and fairly regardless of age, disability, gender, marital status, race, religion, or sexual orientation. It is vitally important that each of our team members feels confident, comfortable, and empowered.
