# Cyber security made simple

Censornet's Total Protection delivers complete security for your organisation with integrated Advanced Email, Web and Data Loss Prevention (DLP).

It ensures your business has tightly integrated, scalable cyber security across all your main channels – web, email and cloud – with multiple layers of defence.

Designed with mid-market customers in mind, Censornet's Total Protection offers platinum-grade cyber defence that's quick to set up, simple to use, and affordable.

Censornet Web Advanced

Web Advanced goes beyond a traditional 'block or allow' approach, to control and secure interactions with all cloud applications:

Complete visibility
to analyse and secure cloud applications and websites.

Plug-and-play
or customise from an easy-to-execute menu of granular controls.

Advanced malware protection
at the network edge, stopping malicious code before it reaches the endpoint.

Censornet Web Advanced, with Data Loss Prevention

Add Censornet's enterprise-grade DLP for the ultimate real-time protection and prevent sensitive data getting into the wrong hands.

- Inline controls automatically block malicious or unintended file exfiltration.
- Protect sensitive data, prevent fines and avoid reputational damage.
- Ensure compliance, with a rich source of audit intel for incident response.

Censornet Email Advanced

Email Advanced gives comprehensive multi-layered protection against all email threats with enterprise-level threat detection rates. It also includes:

Sandbox
Identify and quarantine unseen and zero day threats with advanced anti-malware.

Secure Mail
Send encrypted emails to specific recipients.

Censornet Email Advanced with Data Loss Prevention

Add Censornet's enterprise-grade DLP for ultimate email protection and data security:

- Inline controls automatically block malicious or unintended sharing of sensitive data, in emails or attachments.
- Ensures compliance, with a rich source of audit intel for incident response.
- Protect sensitive data, prevent fines and avoid reputational damage.

The layers of email security

1
Machine Checks
Anti-Virus Engine
Pattern Matching and Message Attribute Analysis
Content Analysis

2
Message Categorisation
Algorithmic Analysis
Threat Intelligence with risk scoring

3
Executive Tracking List
Anti-Malware
Anti-Phishing
Anti-Spam

4
DLP
